

3000 SERIES

DESCRIPTION

The 3000 series is a jaw action crusher that can crush a full UK kerbstone in approximately 30 seconds. A hydraulically adjustable jaw allows output product sizes to range from 10mm up to 100mm. Simply set the crusher jaws to the maximum output sized required and let the crusher do the rest.

Being only 1295mm wide, the 3000 series can enter sites where access and space are restricted. Dust suppression is fitted as standard, by means of fine water spray nozzles utilising standard domestic hose pressure.

Simply hook up the crusher using either three point linkage or skid steer pick up, connect the hoses to your chosen drive source and your ready to crush. Set up time is less than 5 minutes.

This crusher is very popular with farmers, small waste companies and muck away companies looking to utilise their existing equipment to power the crusher. The 3000 series makes light work of reinforced concrete, brick, glass, porcelain and other aggregate type products.

Crushing with the 3000 series can save thousands of pounds on landfill and better still can be driven by your existing equipment.

STANDARD FEATURES

- Jaw aperture of 500mm x 250mm
- Output size choice from 10mm to 100mm
- Choice of Hydraulic or Electrical powered
- Output can be up to 15t – 20t per hour
- Excavator loaded ideally although can be loaded by hand

DIMENSIONS

- Length: 2947mm
- Width: 1295mm
- Loading Height: 1855mm
- Weight: 1.7 tonnes
